

CodeMark Compliance Certificate

A ticket to
risk reduction
in relation to BCA
product conformance
requirements

Subject to conditions and limitations
noted on the certificate.

Why AIR-CELL Insulation?

- CodeMark compliant with the relevant sections of the BCA, including AS/NZS 4859.1
- Advanced thermal performance
- Helps achieve a 5 Star House energy rating
- Fibre-free, non-itchy, non-allergenic
- Quick and easy to install
- Strong, tough, durable
- Applicable for all roof, wall, and underfloor applications.

REDUCING your RISKS

What is CodeMark?
 Considered to be the building industry's highest level of product assurance, CodeMark is a certification scheme managed by the Australian Building Codes Board (ABCB).

CODEMARK™

Why is CodeMark important?

CodeMark references AIR-CELL against the relevant insulation sections of the Building Code of Australia (BCA) to make sure it complies not only with the testing standards, but also the suitability of the product and its compliance to building types and/or applications as regulated by the BCA. CodeMark is the *only* certification scheme that delivers this total compliance.

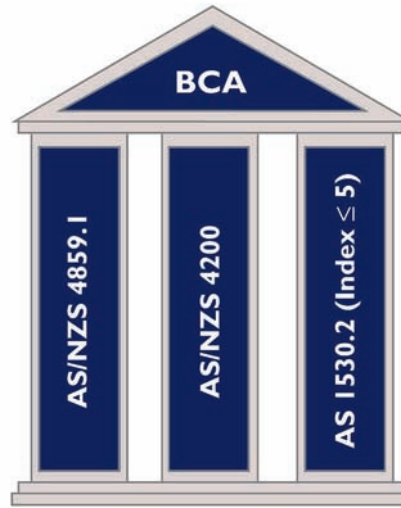

What are the benefits of CodeMark?

- Provides legislated acceptance of AIR-CELL by building certifiers and building control authorities, expediting approval processes
- Helps to manage risk and legal liability
- Increases confidence in building products and practices
- Facilitates the use of innovative new products

What does that mean for me?

It means total peace of mind. With CodeMark certification, home owners can breathe easy knowing that AIR-CELL delivers compliance to the BCA in relation to insulation requirements*; while builders, architects, designers, and building certifiers can breathe easy knowing that they are indemnified from legal liability in relation to product compliance to the BCA.

*Refer to conditions and limitations noted on certificate.

Reflective Insulation (Sarking-type Materials)

There are three basic pillars of BCA compliance that all pliable reflective insulation products must achieve:

1. **AS/NZS 4859.1** Insulation product testing standard
2. **AS/NZS 4200** Pliable membrane standard
3. **AS 1530.2** Flammability testing (Index ≤ 5)

This check-list serves as a guide to help you through the three different ways of identifying BCA compliance for pliable reflective insulation products.
